

Installing Smoothwall Security Certificate - Help

- Apple MacOS
- Microsoft Windows
- Microsoft Windows Mobile
- Android
- Firefox

Apple MacOS

These instructions are based on installing the Certificate onto an Apple MacOS v10.12 (Sierra)based computer but are very similar for most macOS versions.

- Download the corresponding certificate from the Smoothwall Certificate page in Firefly
- From the Finder menu, go to Go > Utilities and Launch the "Keychain Access"
- From this screen click "System" and from the Category panel, click Certificates (as shown below)

• Create a new keychain by clicking the [+] at the bottom of the Keychain Access window;

- Navigate to your download directory and select the certificate file you downloaded earlier;
- Click Open, If prompted, enter your MAC password and click Modify Keychain Access;
- Double-click the relevant certificate in the list (the one named Smoothwall) and Expand the Trust section;
- In the When using this certificate drop-down, select "Always Trust" and close the certificate window;
- When prompted, enter your MAC password to confirm the changes and click Update Settings, then Close the Keychain Access window;

• Open up your Safari web browser and check that you can browse the Internet (if you are using Mozilla Firefox browser see separate HOWTO for instructions to install the Certificate directly into Firefox).

Microsoft Windows

- · Download the corresponding certificate from the Smoothwall Certificate page in Firefly
- Once it has downloaded, open the downloaded file and this should open up the following screen where you should click on the "Install Certificate" button and

Issued to: Smoothwall-default-root-certificate-authority Issued by: Smoothwall-default-root-certificate-authority Valid from 01/ 12/ 2016 to 01/ 12/ 2019	This CA Root or install this cert Authorities sto	rtificate is not trusted. To enable trust, ificate in the Trusted Root Certification re.

Centre			

Microsoft Windows Mobile

These instructions are shown based on installing the Certificate onto a Microsoft Windows Phone version 10 OS but should be very similar on most Windows Phone devices

- Download the corresponding certificate from the Smoothwall Certificate page in Firefly
- This should open up a screen similar to the following where you should click the "Install" option;

- This should install the Certificate onto your device and then need to click "OK"
- Open up your devices web browser and check that you can browse the Internet.

Android

Print (/images/Android/HOWTO - Install the Cert onto aa Android device.pdf)

These instructions are shown based on installing the Certificate onto an Android Galaxy S7 Edge running Android version 6.0.1 (Marshmallow) but should be very similar on most Android devices

• ownload the corresponding certificate from the Smoothwall Certificate page in Firefly

• This should open up the following screen where you should give the Certification a name, such as "EC" and note the default setting for "Credential use" as "VPN and apps" which is correct and then select the "OK" option;

• This should install the Certificate onto your device, some devices may then show the following popup which is normal, you can click on the "Check Trusted Credentials" to review details of the security certificate;

Check credentials
A trusted certificate on your device is allowing a third party to monitor your network activity, including your emails, apps, and secure websites
CHECK TRUSTED CREDENTIALS

• Open up your web browser on your device and check that you can browse the Internet.

Firefox

Print (/images/Firefox/HOWTO - Install the Cert onto the Firefox Web Browser.pdf)

Mozilla Firefox uses its own internal Certificate source, independent of the central one on your computer, in which case you will need to download the certificate file to your computer and then apply the certificate file into Firefox using the following instructions:

- ownload the corresponding certificate from the Smoothwall Certificate page in Firefly;
- Open Mozilla Firefox and click on the "Tools", "Options" menu options OR click the three lined icon on the right hand side of the Firefox Toolbar (shown below) and select the "Options" icon:

to Options		× +			Ļ		25
	C	Q. Search	2	r 🗎	÷	Â	=
					-	~	7

• Next, click on the "Advanced" left toolbar menu option and then the "Certificates" option shown on the right of that screen (indicated below) and click the "View Certificates" button;

0 General	Advanced
Q Search	
Content	General Data Choices Network Update Certificates
Applications	Requests
🗢 Privacy	When a server requests my personal certificate:
🗟 Security 🌙	<u>Ask me every time</u>
🗘 Sync	
Advanced	Query OCSP responder servers to confirm the current validity of certificates
	View <u>C</u> ertificates Security <u>D</u> evices
	\uparrow

• On the next screen click the "Authorities" tab (shown below) and then the "Import" button (indicated below) and then browse and select your previously saved certificate file, click OK and then tick the "Trust this CA to identify websites" option (on the popup screen shown below) and then click OK twice and close and re-open Firefox.
